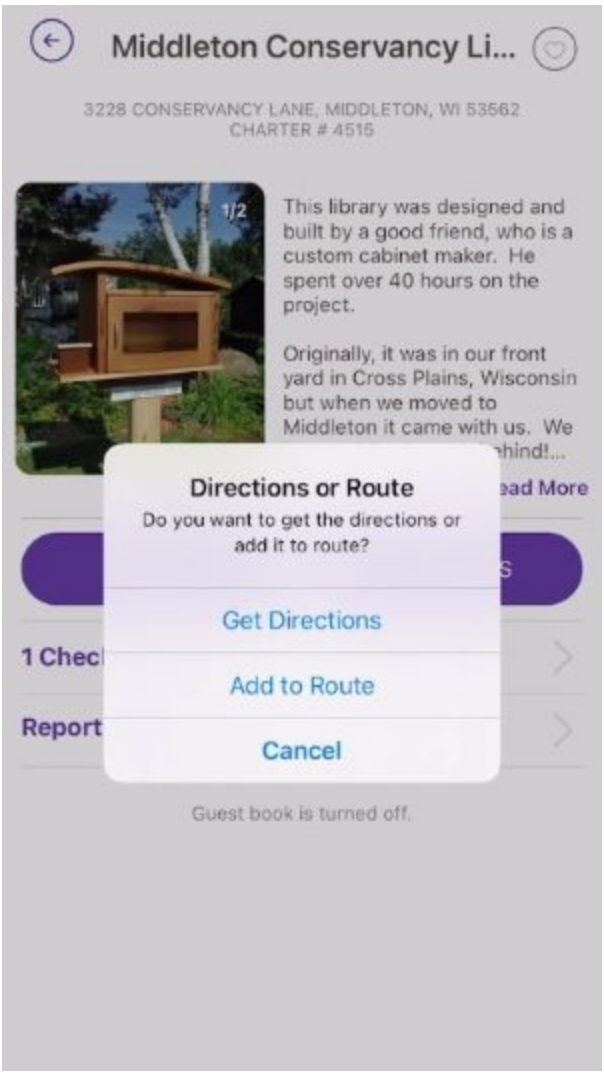
How do I create a route of Little Free Libraries?

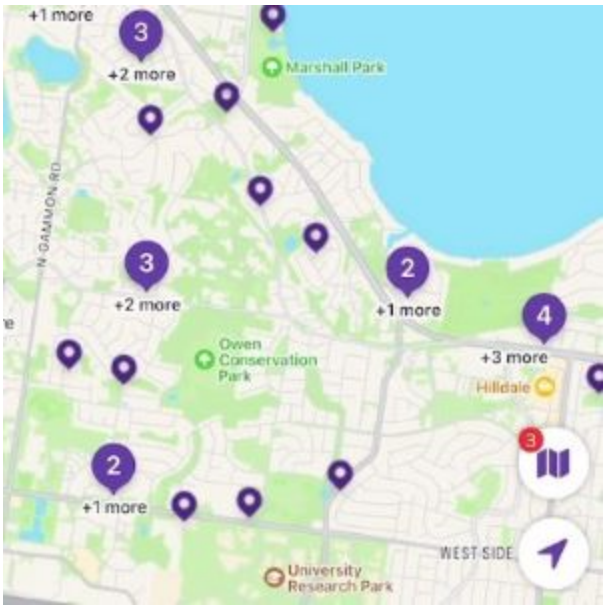
All Mobile App Features · https://littlefreelibrary.org/docs/how-do-i-create-a-route-of-little-free-libraries/

*Note: You must have an account to access the **Routes** feature in the app. Learn how to set up an account.*

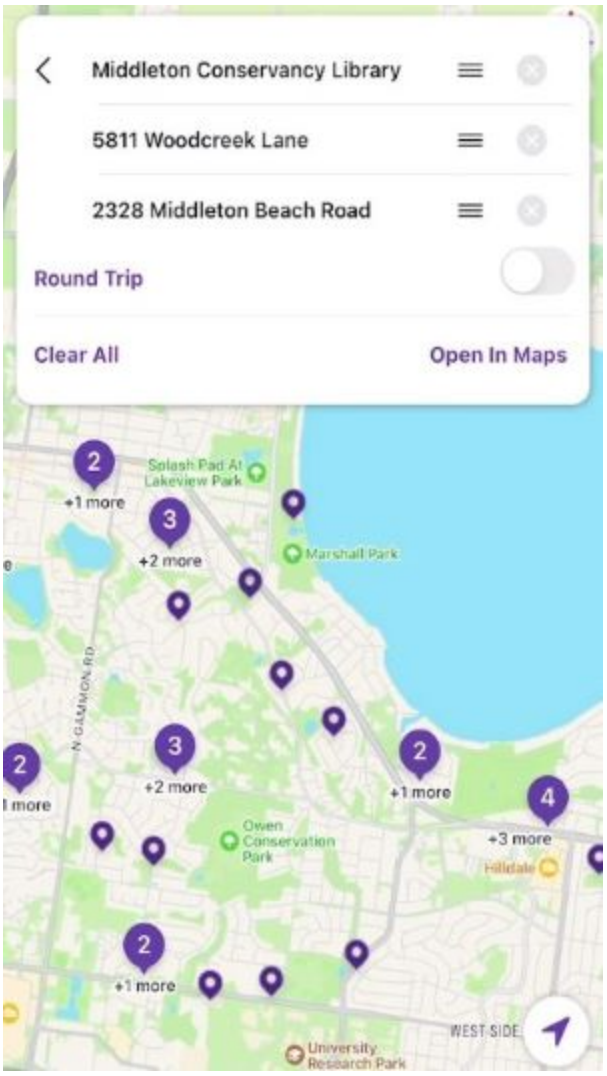
To create a route, view the first Little Free Library you want to visit on the map. Tap on the library's pin on the map. Then tap the **i** icon to view more information. You are now viewing the **Library Detail Screen**. Click the **Directions** button. A pop-up will appear asking you if you want to get directions to this library or add it to a route. Click **Add To Route.** You will get a success message that says "Library Successfully Added to Route."



Click the back arrow in the upper-left of your screen to view the map once more. You will now see a trifold map icon on the right side of the map representing your route with a number to show you how many libraries are currently in your route.



You may add a maximum of 10 Little Free Library locations to your route. You may only create and maintain one route at a time. You can drag and drop the libraries on your route list to rearrange the order. Toggle on **Round Trip** if you want the route to start and end at the same Little Free Library location.



When you are ready to view the complete route, tap **Open In Maps.** Your phone's default map application will open with the route automatically created.
